

Solving Rational Inequalities

Oct 21/2014

- (1) Rearrange all terms to one side, the other side zero.
*** do NOT cross multiply ***
- (2) Write expression with single, common denominator, removing any common factors (holes).
- (3) Determine any vertical asymptotes from the simplified denominator.
- (4) Determine any zeroes from the simplified numerator.
- (5) Use an interval table (sign chart) to check for positive and negative intervals.
- (6) Write your solution, keeping in mind ALL restrictions (holes, VAs, real-world considerations).

Oct 19-7:38 PM

Why we CANNOT use cross multiplication on rational inequalities:

For a rational equation:

$$\frac{x+3}{x+1} = \frac{x-2}{x-3}$$

$$(x+1)(x-3)\frac{x+3}{x+1} = \frac{x-2}{x-3}(x+1)(x-3)$$

$$(x-3)(x+3) = (x-2)(x+1)$$

For a rational inequality:

Because there is a variable involved, we don't know if we multiplied by a positive or negative. Should direction of the inequality change?

$$\frac{x+3}{x+1} \geq \frac{x-2}{x-3}$$

$$(x-3)(x+3) \geq (x-2)(x+1)$$

OR?

$$(x-3)(x+3) \leq (x-2)(x+1)$$

Oct 21-9:19 AM

Ex.1 Solve $x - 1 < \frac{12}{x}$ (see p.291 for similar example)

$$\frac{(x-1) \cdot x}{1} - \frac{12}{x} < 0$$

$$\frac{x^2 - x - 12}{x} < 0$$

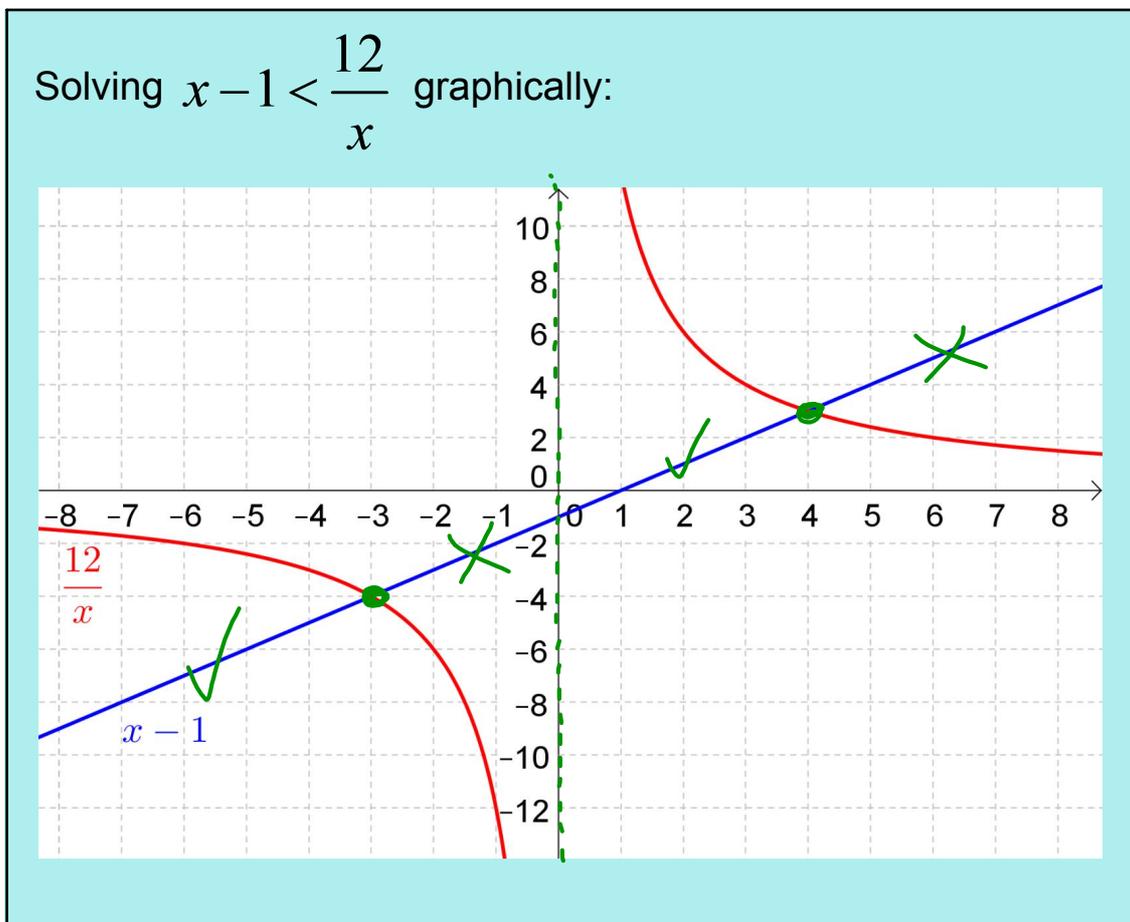

holes: none
 VA: $x=0$
 zeros: $x=4, -3$

$$\frac{(x-4)(x+3)}{x} < 0$$

	$x < -3$ (zero)	$-3 < x < 0$ VA	$0 < x < 4$ zero	$x > 4$
$x-4$	-	-	-	+
$x+3$	-	+	+	+
x	-	-	+	+
result	-	+	-	+

Solution is $x < -3$ or $0 < x < 4$ ✓
 $(-\infty, -3) \cup (0, 4)$ ✓
 $(-\infty, -3)$ OR $(0, 4)$ ✓

Oct 21-9:42 AM

Oct 21-9:47 AM

Ex.2 Solve $\frac{x}{x-1} < \frac{5x-3}{(x-1)(x+1)}$

$$\frac{x}{x-1} - 1 < \frac{5x-3}{(x-1)(x+1)}$$

$$\frac{x^2+x-5x+3}{(x-1)(x+1)} < 0$$

$$\frac{x^2-4x+3}{(x-1)(x+1)} < 0$$

$$\frac{(x-1)(x-3)}{(x-1)(x+1)} < 0$$

hole: $x=1$
 VA: $x=-1$
 zero: $x=3$

$$\frac{x-3}{x+1} < 0, x \neq 1$$

	$(-\infty, -1)$	$(-1, 3)$	$(3, \infty)$
$x-3$	-	-	+
$x+1$	-	+	+
result	+	-	+

Solution is: $-1 < x < 3$

Oct 21-10:01 AM

Assigned Work:

p.295 # 1, 4acf, 5ace (7), 9, 13

$$7. \frac{3x-8}{2x-1} > \frac{x-4}{x+1}$$

$$\frac{3x-8}{2x-1} - \frac{x-4}{x+1} > 0$$

$$\frac{(3x-8)(x+1) - (x-4)(2x-1)}{(2x-1)(x+1)} > 0$$

$$\frac{3x^2 - 5x - 8 - (2x^2 - 9x + 4)}{(2x-1)(x+1)} > 0$$

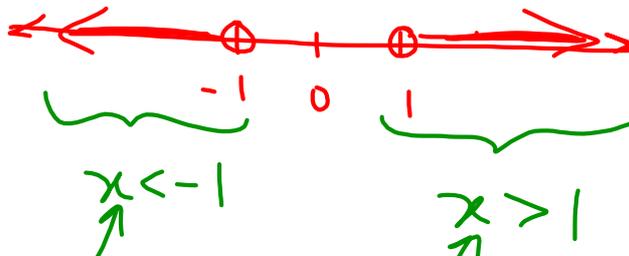

$$\frac{x^2 + 4x - 12}{(2x-1)(x+1)} > 0$$

$$\frac{(x+6)(x-2)}{(2x-1)(x+1)} > 0$$

Oct 21-9:49 AM

$$13. \left| \frac{x}{x-4} \right| \geq 1$$

hint: $|x| > 1$

Oct 22-3:04 PM
